

Great Lakes Cheese

Industrial Ammonia Refrigeration Systems and Commercial HVAC

System Reliability Maximized through Service Program

Great Lakes Cheese is a private label cheese packaging plant. Their core business is the packing of cheese, not their HVAC or refrigeration systems. Yet, without a reliable indoor environment, they would be out of business.

"I sleep better at night knowing Brewer-Garrett is on top of my refrigeration systems" says Dave Ortego. "We made a business decision to staff our process and outsource our mechanical service. There is no way I could provide a cost effective solution to our refrigeration needs 24 hours/day, 365 days/year. The partnership is a win-win for both of our companies."

Mr. Ortego also has seen the life of his equipment extended and the reliability improved by implementing a Brewer-Garrett Assured Service Program. "Brewer-Garrett provides me with solutions. They are very proactive with offering me ideas on how we can reduce our energy and operating costs for our systems. I don't have to call them and ask- they just do it."

"Reliability and service is what Brewer-Garrett is built on. They listen to what we have to say and have things in place I don't see that allows them to continually improve on our long term relationship. We run very lean as a company and need partners that do as well. We don't have to sift through 20 layers of management when working with Brewer-Garrett."

*Providing the Benchmark in Customer Service
for the Building Services & Energy Industry*
